Experience

NASA - Jet Propulsion Laboratory

Apr 2021
- Present   Software Systems Engineer/Architect

What I'm currently working on.

Contributing member to several teams, ranging from Network Engineering, Software Development, Operations Engineering and Cyber Security.

Primary tasks are to address difficult technical issues that arise within those teams. Providing technical guidance to resolve problems and provide long term solutions and processes.

Research new architectural models to improve on our current infrastructure.

Mentor software engineers on coding conventions and methodologies, lead software reviews and provide assistance to help solving difficult programming dilemmas.

Responsible for software portfolio and documentation for existing and new technical processes.

May 2019
- April
2021   Technical Lead / Software Engineer

What I previously contributed on.

Managed 16 different applications across all stages (DEV, UAT, PROD).
Applications ranged from Java Thick Client software built on NetBeans
Platform to Django Framework applications and dot Net Web applications.

Responsible for software deployments across several operating systems.
These range from Windows Servers with web applications running on IIS
with MSSQL Server backend to Docker container deployments on Linux with
Django front end running on Nginx and MongoDB backend.

Heavy utilization of version control system is applied to maintain and
document with GitLab repository running unit tests on GitLab Runners and
processing other continuous integration deployments with Jenkins CI.

Utilize Jira and Confluence to maintain traceability of existing issues or bugs
and up and coming projects that need to be addressed.

Spearheading effort to incorporate Cloud based technologies such as AWS
and Azure. Manage AWS environment that utilizes EC2 tenants and S3
buckets for our development infrastructure. These are managed via AWS CLI
to take advantage of the IAC (Infrastructure as Code) methodology.

NASA - Jet Propulsion Laboratory

October 2007 - May 2019

Lead Software Engineer

Contributions made during my time at this job.

Led the development effort for maintenance of a set of heavily utilized business applications adapted by JPL's business community.

This included development and planning of maintenance and bug fix releases of Java applications developed on the NetBeans Framework.

Maintained development efforts for Perl Web CGI applications.

Administered MySQL/MariaDB and MongoDB Databases.

Administered JenkinsCI Servers for CI/CD processes required for build, test and deploy process. Was subject matter expert on CI/CD that contributed and assisted other teams adapting CI/CD methodologies into their projects.

Worked on projects that required Tableau data integration on AngularJS applications with Java REST APIs deployed to Oracle WebLogic Servers.

Developed Python and BASH programs to assist with backend technology automation and deployments.

NASA - Jet Propulsion Laboratory

June 2005 -
October 2007   Enterprise Systems Analyst

Worked perform during this period.

Provided expertise on implementation of a newly acquired Time Keeping application (Kronos).

Performed data migrations from previous time keeping system. Wrote SQL queries, BASH scripts, Java programs to assist with migration, validations and maintenance of newly implemented software.

Was integral in developing a process that automated manual validations of weekly time keeping records with Java and JSP which were originally performed via a manual Excel procedure.

NASA - Jet Propulsion Laboratory

December 2000
- June 2005   Software Engineer

Worked performed when I started at JPL.

Maintained automated Excel spreadsheets that relied heavily on Visual Basic. These automated Excel financial reports were converted to a Perl Web CGI program with MySQL DB backend.

Automated a paper centric report solution to an electronic PDF file distribution system that allowed for expediency of financial reports distribution.

Built LAMP (Linux, Apache, MySQL, PHP) sites to facilitate custom reporting solutions needed for business partners.

Skills

Programming Languages & Tools

Agile Development & Scrum, Ansible, Artifactory, AWS, BASH, C++, Confluence, Git, Grunt, Gulp, HTML5, Java, JSON, JenkinsCI, Jira, Linux, NodeJS, NPM, .Net, MongoDB MySQL/MariaDB, Perl, Python, PowerShell Salt, SQL, Splunk, Raspberry PI, Rust, SharePoint Administration, and VSphere

Interests

I enjoy being able to spend time with my family, jamming on guitar, bass or keyboards with my son, or just reading horror, fantasy and sci-fi books or movies of the same genre.

Being outdoors is my other passion enjoying activities like mountain biking, snowboarding, hiking, running or just being outside exploring in the woods.

Other pastimes and hobbies include cooking, tinkering with computers, learning new tech. I always like to keep engaged by teaching or learning, whether it's a new song to play, a new programming language or tech stack.
